### Inflatable Screens

Air-retained inflatable screens, ideal for cinemas, exhibitions, shows and outdoor events in general. The main features of these screens are the ease of use, the rapidity of preparation and the versatility of application. The special inflatable structure allows the screen to be used in any context, be it a parking lot, a square, a park or even a beach. AirLuxi inflatable screens are available with a lot of projection surfaces, both for front and rear projection. It is also possible to use a single inflatable structure with several projection surfaces. The electric pump to inflate the structure is always included in the supply.

- Projection ratio 16:9, net view width cm. 500, 720 and 800
- Available fabrics: White, Hi-gain White, Contrast Grey, Sonora, Rear Pro, Dual Face
- Fabrics with borders and eyelets, supplied with rigid pvc rods. The projection surfaces are mounted on the inflatable structure by inserting the rigid pvc rods placed inside the perimeter borders directly to the hooks on the structure. This system allows to obtain a perfect flatness and uniformity of the projection surface
- Air-retained inflatable structure, made with pvc coated polyester of 500 g/m2 for the smaller sizes and 950 g/m2 for the larger ones. Made with triple heat sealing, safety valve, self supporting rear foot
- The structure is equipped with metal eyelets on the base perimeter and on the uprights, for anchoring the screen to the ground
- The inflator is a high performance electric pump, 220V 1200W, with bayonet coupling
- Upon request it is possible to customize the inflatable structure with brands, logos and advertisements.
