

The performance of today's projectors owes a great deal to the development of projector lamps. These lamps are at the cutting edge of lighting technology, operating at exceptional pressure and temperature levels. Only the world's leading lighting manufacturers have been able to produce lamps to the necessary performance, reliability and longevity standards required by the projector brands. To-date there have been only seven: Philips, Osram, Ushio, Phoenix, Iwasaki, Matsushita and Epson and between them they hold many patents for the technologies involved.

Original  
Lamps

Original  
Performance ✓

Diamond Lamps has a unique set of agreements to buy lamps directly from the original manufacturers and, with their endorsement, to fit them into its own cages for sale directly into the replacement market. It now offers lamp modules for thousands of projector models, all using original lamps from the same manufacturers who supply the projector brands with the lamps used in their own lamp modules.

Fewer Steps  
to Market

Lower  
Prices ✓✓

## BEWARE COPIES – FALSE ECONOMY!!!

Some companies in SE Asia have now created copies of many of the original lamps and sell them into the replacement market as both lamps and modules. These copies generally offer lower performance, poor reliability and reduced lifetimes (false economy). And in many cases they are breaking patent laws.

100% original performance – same as OEM  
But better prices  
And extended warranty
